ABSTRACT : The interculturing operation breaks the upper surface of the soil, uprooting the weeds, aerating the soil, making good mulch, so moisture inside properly retained from evaporation. In the animal-drawn hoe, the implement draft and the capacity of the animals to provide the required power will also affect performance, as will ergonomic considerations related to the comfort of the operator. A intercultural hoe could be easily handled, light, strong, durable, cheap, adjustable for different crops, and can be easily manufactured locally. The present bullock hoe consists occupied the space coverage of width 95 cm, total height of 102 cm, three number of tynes and angle 41°. The shape of blade is rectangular and beam length of 236 cm. The field capacity of the implement was noted to be 0.27 hectares per hour which includes the turning losses, the field capacity was found to be 0.17 hectares per hour for the area of 10×20 m², which gives the field efficiency of 81.43%.

Key Words: Field, implement, hoe, bullock, blade.
