

Assessment of economic injury level (EIL) due to *Holotrichia fissa* Brenske on groundnut under greenhouse and field conditions

R.G. Shrilakshmi and R.R. Patil

Received December 5, 2017 and Accepted March 11, 2018

ABSTRACT : Present study was carried out at two locations, the green house experiment was carried at Main Agricultural Research Station, Dharwad and field experiment was carried at Hattarawata (Belgaum district) in *kharif*- season during 2014-15. The results showed that Economic Injury Level (EIL) for *H.fissa* in groundnut was 1.03 grubs per 0.24m² area under green house conditions and 1.00 grubs per m² area under field conditions.

Key Words : Groundnut, economic injury level (EIL), white grub (*Holotrichia fissa*), field, green house.
